Introduction

These guidelines are for new and used electric vehicle dealerships to help you implement the new Electrify Nova Scotia Provincial Rebate Program. The goal of the program is to accelerate electric vehicle uptake in Nova Scotia by providing consumers with convenient and fast rebates on eligible battery electric vehicles (BEVs) and plug-in hybrid electric vehicles (PHEVs).

As this is a fast-changing area, there will need to be continuous learning and periodic adjustments to the process to make the program a better fit for consumers and dealerships. We continue to encourage and welcome your feedback on how we can improve the program.

Key Changes as of April 25, 2022

OLD PROGRAM	NEW PROGRAM
<p>MSRP Eligibility Caps</p> <ol style="list-style-type: none"> 1. Vehicles with 6 seats or less, where: <ol style="list-style-type: none"> a. the base model MSRP is less than \$45,000; and b. higher priced versions of these vehicles, up to a maximum MSRP of \$55,000 2. Vehicles with 7 seats or more, where: <ol style="list-style-type: none"> a. the base model MSRP is less than \$55,000; and b. higher priced versions of these vehicles, up to a maximum MSRP of \$60,000 	<p>MSRP Eligibility Caps</p> <ol style="list-style-type: none"> 1. Cars¹ where: <ol style="list-style-type: none"> a. the base model MSRP is less than \$55,000; and b. higher priced versions of these cars, up to a maximum MSRP of \$65,000 2. How does the Program Work?

To ease administration and simplify program messaging, the Electrify Nova Scotia Rebate Program is largely modelled on the federal [iZEV program](#), with some key exceptions (detailed below).

First, the key similarities between the provincial and the federal programs are as follows:

- Nova Scotia is matching Transport Canada's [list of eligible vehicles](#) for the federal iZEV program.
 - E.g., a BEV that is eligible for the \$5,000 federal iZEV incentive is also eligible for a provincial rebate of \$3,000. These rebates can be stacked, so the consumer gets a total of \$8,000.
- Both BEVs and PHEVs are eligible for rebates.
- New PHEVs that are considered “long-range” in the iZEV program will be recognized as the same here and will qualify for a rebate of \$3,000. New, “short-range” PHEVs will be eligible for a rebate of \$2,000.
- The Nova Scotia rebate will be applied after taxes and fees.
- As of July 5, 2021, rebates on Battery Electric Vehicles (BEV) and Plug-in Hybrid Vehicles (PHEV) will be provided at point of purchase. Dealerships will be reimbursed upon providing the required documentation to the Program Administrator.
 - All applications must be received within 30 days of purchase to be eligible. Rebates are provided on a first come first serve basis.
- Rebates are applicable to both purchases and leases of new vehicles. The amount of the rebate will be prorated over the length of the lease. See [Leased Vehicles](#) for more information.
- Rebates are available to organizations as well as individual consumers. Municipalities, non-profits, businesses, and First Nations can receive rebates.
 - Consumers are limited to one (1) new vehicle rebate and one (1) used vehicle rebate per calendar year. Note that if two or more individuals want to be listed on

the Bill of Sale or Lease Agreement, one of them must elect to be the person against whom the rebate is registered for tracking purposes.

- Organizations can access up to 10 new vehicle and 10 used vehicle rebates per calendar year.
- Rebates are not available for Federal or Provincial Departments, agencies, or Crown corporations.

These are the key differences from the federal iZEV program:

- The Electrify Nova Scotia Rebate Program also provides rebates for eligible used BEVs and PHEVs. See [Used Vehicles](#) for more information on vehicle eligibility.
- Hydrogen fuel cell vehicles are ineligible for rebates.
- There is no tax write-off being offered by the province.

See the Electrify Nova Scotia Frequently Asked Questions for more details on the program.

Program Timing

The Electrify Nova Scotia Rebate Program launched on **February 24, 2021**. Any leases or purchase agreements executed on or after that day are eligible to receive a rebate.

The program does not have an end date. The rebates will remain available until the budget allocated for this program is completely exhausted or until such time as the Government of Nova Scotia decides to terminate it, with or without notice. Funding will be provided on a first-come, first-serve basis for eligible electric vehicles acquired on or after February 24, 2021.

As the Program Administrator, we are not in control of the decisions around program funding levels or timing. However, we will give you as much information as we are able as early as possible to assist you in managing your business.

Eligible Vehicles

New Vehicles

The rebate for new electric vehicles will apply to the same makes and models as in the federal iZEV program. Specifically, the rebate will apply to:

1. passenger cars, where the base model trim MSRP is less than \$55,000

- higher priced trims of these vehicles, up to a maximum MSRP of \$65,000, will also be eligible for a rebate; and
2. Station wagons, pickup trucks, SUVs, minivans, vans, and special purpose vehicles, where the base model MSRP is less than \$60,000
 - higher priced trims of these vehicles, up to a maximum MSRP of \$70,000, will also be eligible for a rebate.

Please see the list of [eligible vehicles](#) available from the iZEV program.

Important: Transport Canada adjusts this list from time to time and reserves the right to take models off the list at any time. Any changes to the list from Transport Canada will be effective in Nova Scotia immediately upon publication of the changes by Transport Canada.

As in the federal program, demonstrator vehicles with less than 10,000 km will be eligible as new vehicles if they would otherwise qualify for a rebate.

All vehicles must also:

1. meet all federal and provincial motor vehicle safety standards;
2. be intended for use on public streets, roads, and highways; and
3. have at least four functioning wheels and be highway capable (e.g., not a low-speed vehicle).

Note that electric motorcycles, scooters and off-road vehicles are not eligible for rebates.

Used Vehicles

The used electric vehicle rebate will apply to any year, make or model of BEV or PHEV so long as it meets the following criteria:

- It must be sold by a licensed dealer (i.e., not a private sale) located in Nova Scotia.
- It must not have had the Electrify Nova Scotia used vehicle rebate previously applied (i.e., only one used vehicle rebate is available per vehicle).
 - Used vehicles that have previously had the Nova Scotia new vehicle rebate applied can receive the used vehicle rebate, but this is the lifetime maximum per vehicle (i.e., one new vehicle rebate and one used vehicle rebate.)
 - The Program Administrator will track the vehicle identification number (VIN) for all vehicles that receive a new or used rebate to verify whether the vehicle has previously had the used vehicle rebate applied. We are exploring ways to share

the list of VINs in real-time so dealerships can vet newly acquired used vehicle inventory for rebate eligibility.

- Used vehicles that have had new vehicle rebates applied by other provinces or countries are eligible to receive the Nova Scotia used vehicle rebate.
- The retail price for the used vehicle must be between \$10,000 and \$55,000 for BEVs, and \$10,000 and \$40,000 for PHEVs, regardless of their original MSRPs.
 - This means that vehicles that would have been ineligible for a new vehicle rebate by virtue of their MSRP can be eligible for a used vehicle rebate.
- BEVs have been evaluated to have the residual capacity of the battery with respect to its initial capacity (a.k.a. a battery's State of Health report). PHEVs are exempt from needing to provide the battery state of health.
 - This information must be disclosed to the consumer in writing on the Bill of Sale prior to the sale being finalized. If this is not possible, the dealership will need to provide an [**Acknowledgement of Battery Capacity Disclosure Form**](#) along with the documents sent for the rebate application.
 - This is a measure intended to protect the consumer (and dealerships) by ensuring that the customer is made aware of the range they can reasonably expect from their purchase so there are no surprises later. There is no threshold set for what an acceptable battery capacity is; it is up to the consumer to decide what works for them.
- The vehicle meets all federal and provincial motor vehicle safety standards.
- The vehicle is intended for use on public streets, roads, and highways.
- The vehicle has at least four functioning wheels and is highway capable (e.g., not a low-speed vehicle).

Important: Each Used EV or PHEV can only have a rebate applied once in the vehicles lifetime. If you are unsure if a used vehicle has had a rebate claimed you can use our online Used EV Rebate Look-Up tool : <https://evassist.ca/vinlookup/>

Battery Capacity Testing

Battery capacity testing requires more than simply reflecting the state of charge (SOC) displayed on the vehicle's dash. This will always show 100% when the vehicle is fully charged. However, different models display their SOC in different ways and a reading of 100% will likely display different kilometre ranges depending on changing factors such as ambient temperatures, how the vehicle has been driven lately (e.g., eco versus sport modes) and even if a recent driver has been test driving the EV up vs down hills.

A vehicle's battery will naturally degrade over time, typically on the order of a few percentage points per year (see, e.g., the [Geotab Battery Degradation Tool](#) for an example of typical degradation rates). However, some vehicles may have defects or issues that result in a faster-than-expected loss that would not be reflected by the SOC reading. The state of health (SOH) of a battery measures its actual energy storage capacity remaining vs when it was new and is generally shown as a percentage or in kilo watt hours (kWh). This is the SOH measurement that must be disclosed to the consumer for any used Battery Electric Vehicle.

One can acquire an automotive scanner or an On-Board Diagnostic-2 (OBD2) tool reader and an app (such as TorquePro, FOREscan, EngineLink, etc) on a phone or laptop to get the SOH report of a BEV. If choosing an OBD2 and app, please note you will need the Parameter IDs (PIDs) for each automaker of BEV you are asking the OBD2 tool to read (Nissan leaf differs from Chevy Bolt, for example). For further guidance on which diagnostics tool to use, please contact the OEM of that vehicle for best practices or refer to community driven PID guides.

Rebate Amounts

The rebate amounts for eligible electric vehicles are as follows:

Vehicle Type	Vehicle Category	New Vehicles		Used BEVs and PHEVs	
		MSRP (New Vehicles)	Rebate Amount	Retail Price (Used Vehicles)	Rebate Amount
BEV	Passenger cars	Less than \$55,000 for base model, up to a maximum of \$65,000 for higher-priced trims	\$3,000	\$10,000 to \$55,000	\$2,000
	Station wagons, pickup trucks, SUVs, minivans, vans, and special purpose vehicles	Less than \$60,000 for base model, up to a maximum of \$70,000 for higher-priced trims	\$3,000	\$10,000 to \$55,000	\$2,000
PHEV, long-range	Passenger cars	Less than \$55,000 for base model, up to a maximum of \$65,000 for higher-priced trims	\$3,000	\$10,000 to \$40,000	\$1,000
	Station wagons, pickup trucks, SUVs, minivans, vans, and special purpose vehicles	Less than \$60,000 for base model, up to a maximum of \$70,000 for higher-priced trims	\$3,000	\$10,000 to \$40,000	\$1,000
PHEV, short-range	Passenger cars	Less than \$55,000 for base model, up to a maximum of \$65,000 for higher-priced trims	\$2,000	\$10,000 to \$40,000	\$1,000
	Station wagons, pickup trucks, SUVs, minivans, vans, and special purpose vehicles	Less than \$60,000 for base model, up to a maximum of \$70,000 for higher-priced trims	\$2,000	\$10,000 to \$40,000	\$1,000

Leased Vehicles

The rebate can be applied to eligible new vehicles leased for a minimum of one year but will be prorated based on the length of the lease. For example, a 48-month lease is eligible for the full rebate amount for the eligible vehicle in question and a 24-month lease will be eligible for half of the rebate for that vehicle. The length of the lease MUST be visible on the lease agreement submitted to the program.

Length of Lease	BEVs and Long-Range PHEVs	Short-Range PHEVs
48 months	\$3,000	\$2,000
36 months	\$2,250	\$1,500
24 months	\$1,500	\$1,000
12 months	\$750	\$500

Important: The Government of Nova Scotia is mandating that lessors retain their vehicle for a minimum of 12 months, or they will have to repay a prorated portion of the rebate.

Applying the Rebate

As of July 5, 2021, rebates on Battery Electric Vehicles (BEV) and Plug-in Hybrid Vehicles (PHEV) will be provided at point of purchase.

- All applications must be received within 30 days of purchase to be eligible. Rebates are provided on a first come first serve basis.

Dealerships can apply POS rebates per the following process:

1. Verify eligibility

- a. Verify that any new BEV/PHEV purchases or leases meet the eligibility criteria and fall within the parameters of the program.
- b. Verify the eligibility of the purchaser by confirming that they are one of the following:
 - resident of Nova Scotia;
 - authorized representative of a Nova Scotian municipality;
 - authorized representative of a business or non-profit that is registered in Nova Scotia, or which has a Nova Scotia-based affiliate; or
 - authorized representative of a First Nation located in Nova Scotia.
- c. Verify that the purchaser is not a Federal or Provincial Department, agency, or Crown corporation, as they are not eligible for rebates.

2. Apply the rebate

Verify the rebate level for the purchase or lease and apply it to the price of the vehicle after taxes and fees.

3. Complete Customer Consent and Rebate Received Form

While the customer is present, the consumer consent and rebate received from must be completed. These forms are available on our website electrifys.ca. This form has 2 purposes. First, this form allows you to share the protected information in the sales documentation with us as a third party. Second, customers sign the form to acknowledge that they have received the rebate at the time of purchase. Regardless of whether the rebate on your bill of sale this section must be completed by the customer. Without this form, we cannot process your rebate claim.

Neither the Program Administrator nor the Province of Nova Scotia will be held liable for rebates provided on ineligible vehicles. The Program Administrator reserves the right to refuse reimbursement applications that do not meet the Program Guidelines.

Getting Reimbursed

1. Register your business

Have an authorized representative register your business with the Program Administrator by going to the [registration page](#) and submitting your information. This only needs to be done once and will enable payment through direct deposit. (If you have already applied POS rebates prior to registration, these will be honoured so long as they meet the program criteria publicly available at the time the rebate was applied.)

2. Submit a claim

Your authorized representative will submit the completed sale information using the following process:

- a. Visit our online claims form (also accessible through electrifys.ca; you may want to bookmark this link to make it easy to find again.)
- b. Select your dealership name. All communication regarding your claim will be with the email that was used when the registration process was originally completed. If you would like a secondary individual to receive emails about this claim this can be added in the “alternate dealer/retailer email” section.

- c. Complete the form for each product that is rebated. You will need to enter the consumer's first and last name, address, and date of birth (this information will be on the consumer consent and rebate received form), as well as information on the year, make, model, trim, type (BEV, LR-PHEV or SR-PHEV) and VIN of the vehicle.
- d. Upload the required documents:
 - i. Bill of Sale or Lease Agreement **[required]**
 - ii. Consumer Consent and Rebate Received Form **[required]**
 - iii. Certificate of Registration **[required]**

For privacy reasons, in the supporting documentation, please do not include (or redact) credit card or other payment information.

3. Track your claim

Each claim will be assigned a unique tracking ID. You will receive an email with your application ID.

If there is missing data, the Electrify team will email and cite the application ID, and ask for the missing piece of data.

Once Approved or Declined you will receive an email notifying you of the status change.

If receiving payment via EFT, the EFT will cite the last 6 digits of the VIN as the bill ID number.

If you would like to find out the status or have questions about your application, please include the application ID in the email.

Payments will be made to retailers in a maximum of net 30 days from submission of complete documents. The time required to request missing or incomplete information will be added on to this timeline.
